

A FLIGHT PLAN FOR SECURING YOUR AIRPORT

Airports are a huge challenge to secure. Different populations move in and out of the buildings; independent contractors, airport employees, passengers and crew, all come and go 24 hours a day, 7 days a week. AMAG's Symmetry Homeland Security Edition (HSE) and Symmetry Video provide **everything an airport needs to secure its assets, staff and customers** starting at the perimeter and moving inside to the terminals.

KEY FEATURES FOR AIRPORT SECURITY

- FIPS 201 Compliance for future airport credentials
- Integrated Video Surveillance for incident response
- Video Analytics for added security
- End-to-End COTS Solution, No Customization
- No-Fly List Integration

SECURITY MANAGEMENT

AMAG Symmetry HSE is a comprehensive Security Management System providing all security needs in one user interface. Common functions such as identity management, credentialing, access control, video, biometrics, intrusion detection / alarm management and graphical maps are all included in one platform. Symmetry HSE integrated solutions allow you to choose the best 3rd party systems to meet your needs. Increase landside / airside and perimeter security by adding a PIN or biometric reader to restricted areas. Extended door times for jetway is a standard feature of Symmetry HSE. Easily manage each terminal, the private businesses within the airport, and the administrative offices from **one central location that seamlessly integrates all security functions.**

THREAT LEVEL MANAGEMENT

Symmetry HSE's Threat Level Manager™ module allows you to instantly change the security level of the airport based on the current threat level. In the event of a security alert, personnel can easily change the threat level to lock down a terminal or the entire airport. Alarms can be automatically emailed or sent via text message to designated staff on or off site to initiate immediate action. Integration with paging and mass notification systems allow for split second response. Automatic camera call-up and changes to video recording allows security staff to instantaneously react. A more efficient response saves time, money and possibly lives.

ACCESS CONTROL SOLUTIONS

Symmetry Enterprise Homeland Security Edition

Advanced, scalable integrated security management system

CREDENTIAL / ID SOLUTIONS

Symmetry Identity Management

TWIC, PIV, smartcard, biometrics management system

VIDEO MANAGEMENT SOLUTIONS

Symmetry Video Management System

Open platform video management system

Symmetry EN-9000 Series Video Hardware

Multi-channel edge-based H.264 video servers and encoders

OPEN ARCHITECTURE

Symmetry XML

Allows Comprehensive 3rd Party Integration

Symmetry Data Connect

Progressive data import/export service

VIDEO MANAGEMENT

Symmetry Video is an open platform video management system providing advanced capabilities including the ability to integrate IP cameras, DVRs, NVRs and the Symmetry EN-9000 Series edge network video encoders/servers. All these video sources can be displayed in one easy to operate graphical user interface. With Symmetry Video you can simultaneously view live video for potential threats and instantly playback recorded video for quick review. Integration between access control and video allows for more efficient monitoring, response and use of airport resources. Symmetry Video connects to current and legacy DVR/NVR products, as well as IP and analog cameras to provide airports with the flexibility they need while protecting their investments.

ADDITIONAL FEATURES

- Custom Reports for TSA
- Disaster Recovery / Fault Tolerant
- Visitor Management
- Logical Security
- Intrusion Detection
- Building Management
