

**A CURRICULUM FOR SECURING YOUR SCHOOLS**

**AMAG** Technology's complete security management system provides everything a school district needs to secure its students, staff, school(s), and assets. An AMAG security management system can be a largely invisible, yet powerful ally in providing high-level, flexible protection.

Now you can control who goes where and when 24 hours a day, seven days a week. Manage visitors, staff, and confidential student information, all with one security management system. The system offers additional value by providing integration with other security systems, including intrusion, fire detection, video, and remote barriers.

## VIDEO SOLUTION COMBATS VANDALISM

Strategically placed cameras can drastically reduce vandalism in your school's susceptible areas. AMAG's video solution offers a range of cameras for any environment, whether it's outside in extreme weather conditions or a discreet camera outside a restroom doorway. Configure the camera to record only motion, and link the camera to trigger a response such as notifying the principal or police.

## DETER DISRUPTIVE BEHAVIOR

Install cameras in high traffic areas so students can see they are being recorded. Students are less likely to misbehave if they know they are being watched. AMAG's video management solution allows a principal or office staff to record activity throughout a school. Record activity the way you choose, whether it's all the time or in an event driven mode, and quickly go back and review events. Cameras not only create a deterrent to fighting, but administrators can review an event to learn the real story.

## SCHOOL TAKEOVERS & CRISIS MANAGEMENT

AMAG's security management systems (SMS) can work in conjunction with your school's crisis management plan. Cameras can send a critical message to designated off-site staff to notify police and school administration of a crisis. The time saved here could save many lives, meanwhile, cameras are recording the entire event for staff to evaluate and take action. AMAG's SMS allows you to instantly change the security level of your school. One click and your school is locked down.

## ACCESS CONTROL

Monitor and control who has access to secured areas of the school. AMAG's range of SMS's allows you to choose the level of security you need. Manage one school or your entire district from one central location and seamlessly integrate all security functions you need, i.e. video, intrusion, visitor management, ID badging, and many other security functions.

## VISITOR MANAGEMENT

Proper visitor management practices keep out unwanted perpetrators and your school safe. AMAG's VM solution provides temporary badges to visitors so staff knows they are authorized guests. With the help of your staff, unauthorized guests should be escorted to the main entrance for proper ID.

## ASSET MANAGEMENT

Proper management of school assets saves your district thousands of dollars every year. Lost or stolen computers, library books, media equipment and sporting equipment are expensive to replace. With AMAG's asset management package, you tag all appropriate items with a special device. Asset tracking antennas affixed to each doorway generate an alarm when an item reaches the door, automatically locking the door.

## SMART CARDS

AMAG's smart card solution provides an easily managed answer to security. Smart cards manage students, staff and visitors. One card provides entrance to buildings, cashless vending, library check-out, parking and more. Whether you want staff to have access cards, or your entire campus to have a cashless vending system complete with access control, AMAG's smart card option offers an affordable solution.

**AMAG** understands the sensitive and complex issues involved in securing a school or multiple schools. AMAG Technology has been securing schools, universities, government entities, and large campuses for more than 30 years. Our proven track record demonstrates our commitment to technology-driven products and customer satisfaction.

Extensive research, design and engineering expertise, and modern production facilities, ensures an ongoing commitment to provide reliable and cost-effective security management systems for today and in the future.

Contact AMAG Technology or one of our valued resellers to see what we can do for you. Together we can protect our most precious possession, our children.
