

**A PRESCRIPTION FOR SECURING
YOUR MEDICAL FACILITY**

The number of people moving through a hospital makes security a complicated challenge. Healthcare facility managers have a responsibility to ensure the safety and security of patients, visitors, medical and administrative staff around the clock. Pharmacies, emergency rooms, pediatric wings, and birthing centers among other areas, require different security procedures than a main entrance or radiology department.

The protection management issues involved are complex, but the solution is simple.

AMAG Technology's Security Management System (SMS) provides everything a medical facility needs to secure its assets and the people inside the building or campus. Hospitals can more easily comply with HIPAA standards through the utilization of the SMS, a largely invisible, yet powerful ally in providing high-level, flexible protection.

VISITOR MANAGEMENT

Proper visitor management practices keep unwanted visitors out and your medical facility safe. The SMS provides temporary badges to visitors so staff can identify them as authorized guests. With the help of your staff, unauthorized guests should be escorted to the main entrance for proper ID. Track a visitor's scheduled arrival and departure times against their actual signed in and out times. If specified access rights have been assigned, system operators can track the visitor's movement throughout the medical facility. AMAG's Symmetry™ Video Management Solution can record all movement.

ACCESS CONTROL

Monitor and control who has access to secured areas of the medical facility. AMAG's SMS allows you to choose the level of security you need. Increase security by adding a PIN or biometric reader to laboratories or high security areas. Manage one hospital, a medical campus or multiple buildings located miles apart, from one central location and seamlessly integrate all security functions you need, i.e. video, intrusion, visitor management, ID badging and many others.

CRISIS MANAGEMENT

AMAG's SMS can work in conjunction with your hospital's crisis management plan. The SMS Threat Level Manager (TLM™) allows you to instantly change the security level of your hospital. One click and your hospital is locked down. Alarms can be emailed to designated staff on or off-site. The time saved could save many lives. Cameras are continuously recording for security staff to evaluate and react.

INTEGRATION CAPABILITIES

AMAG's SMS provides integrators and third party vendors the ability to maximize the system through integration with other electronic systems, such as: asset management, logical security, infant protection and many more. AMAG's XML Developer's Kit is available to other companies allowing them to write interfaces to the SMS to ensure a full security solution is provided and that data is easily shared among the systems used.

AMAG's SMS open platform integrates with third party databases such as human resources, patient records, pharmacy, visitor management, billing and parking. The SMS can also integrate with intrusion systems, video management, intercom and duress systems.

"The system can be expanded into other areas and I can put multiple security functions on the program," said Tim Woodward, Corporate Director of Safety and Security, Liberty Health. "It helps us to develop a better security system for our staff."

SMART CARDS

AMAG's smart card solution provides an easily managed answer to security. Smart cards manage medical and clerical staff, medical students, visitors and contractors. One card provides entrance to buildings, cashless vending, food service, parking, time and attendance and more.

AMAG understands the sensitive and complex issues involved in securing a hospital or medical complex. We work closely with you to understand your special needs, and adapt our security management system so it can manage all aspects of your building or campus.

AMAG Technology has been securing medical facilities, government entities, and large campuses for more than 30 years. Our proven track record demonstrates our commitment to technology-driven products and customer satisfaction.

CEDARS-SINAI MEDICAL CENTER

"Cedars-Sinai Medical Center utilizes all feature sets from AMAG's access control system," said Donna Earley, Director of Environmental Health and Safety. "It seamlessly integrates with our infant protection system, CCTV and other building systems to provide a complete security management system. The user interface is intuitive, which allows updates and reconfigurations to quickly adapt as our security needs change."

Contact AMAG Technology or one of our valued resellers to see what we can do for you. It might be just what the doctor ordered.

AMAG CAN HELP SECURE YOUR MEDICAL FACILITY

ISSUE:

Identity Management
Pharmacy Control
Theft
Visitor Management
Crisis Management
Integration to Critical Systems
