Products

AMAG Technology is a leader in advanced video and access control solutions. These solutions have been designed and manufactured to meet the most rigorous requirements of multi-national, multi-building and campus environments while still being scaleable enough for less complex systems for those buildings only requiring one or two doors and/or cameras. AMAG recognizes the move towards LAN/WAN based system architecture and has responded accordingly with a feature rich line of products designed to be network friendly.

AMAG's Video Management Center provides advanced capabilities, including the IP-based Symmetry™ Video Management software and Symmetry Edge Network Video Server (ENVS®). Symmetry is an open video management platform for video servers, digital video recorders and IP cameras. The edge-based video solution allows users to store video activity and forward it at their convenience. Users can preserve their technology investment and add IP camera sources when ready, therefore future-proofing. Symmetry Video encompasses video analytic solutions to provide a proactive tool and prevent security breaches. AMAG selects best-in-breed video analytics partners to provide the best video content analysis solution.

The Symmetry Security Management System is provided in variants designed to make finding the right solution easy and affordable. All software is optimized to locate IP edge devices

and aid in the installation process, simplifying configuration. Some key features of each:

Symmetry Professional software fits applications that require a more sophisticated set of features but at a cost-effective price point. Symmetry Professional can meet all the system requirements for the majority of mid-sized, multi-location facilities; those with requirements of up to 512 readers and nine client workstations.

Symmetry Enterprise software is the perfect solution for systems operating across a LAN / WAN with multiple operators administering the system. Symmetry Enterprise can support an unlimited number of readers and clients making it ideal for larger, multi-site applications that require centralized monitoring and database administration.

Symmetry Global is the product to use when large organizations have buildings spread over a wide geographic area and provides the functionality to bring them all together. Combined with Symmetry Professional or Symmetry Enterprise software at the individual locations, Symmetry Global provides the means to manage databases and monitoring in either a centralized or de-centralized manner or a combination of both. It provides for regionally distributed databases supporting multiple servers with centralized cardholder information. This architecture guarantees the integrity of the information and system configuration in the event of a network failure.

Company Backgrounder

AMAG is in tune with the ever-changing needs of the US Government with its Symmetry Homeland Security Management System and S844 Government compliant smartcard reader. AMAG is committed to this growing vertical market and keeping the system compliant with the various standards and directives such as: PIV-II, FIPS 201 and HSPD-12. Symmetry Homeland has all of the features and options found in the other software versions.

All Symmetry software packages operate on user-friendly Microsoft operating systems, which follow Microsoft menu structures and functionality. This ensures that system administrators will be comfortable using AMAG's software right from the start. AMAG is a Microsoft Certified Gold partner ensuring that all products meet the latest and greatest operating standards.

The Symmetry M2150 8DBC Controller product portfolio provides distributed processing for Symmetry Professional and Symmetry Enterprise Security Management Systems for version 6.0 and higher. This powerful eight door controller can expand to up to 16 doors, and support connections to a client PC via a local area network, hardwired communications port, or remote dial-up modem. The 8DBC integrates peer-to-peer with the Symmetry ENVIS[®], allowing hardware based trigger commands to be executed from the access control panel straight to the digital video system.

The Symmetry Edge Network Controller is an IP centric solution that provides distributed intelligence at the door. The Symmetry Edge Network Controller utilizes Power over Ethernet (PoE), providing up to 700 mA of power for each reader and lock, therefore eliminating a separate power supply. Once installed on a LAN, the SMS will automatically identify and configure it.

Markets Served

AMAG meets the needs of many vertical markets by working with the best, most qualified integrators and resellers in North America. Working together, AMAG and its Symmetry Authorized Resellers educate end users on the effectiveness of using a security management system to realize cost savings in operations and improvements in efficiency while securing people and assets. AMAG also strives to help customers maximize the use of legacy infrastructure while deploying the latest technologies.

AMAG has a proven track record in providing solutions to healthcare facilities. Hospitals can more easily comply with HIPAA standards through the utilization of AMAG's Symmetry Security Management System. In addition, through the use of SDKs and the Symmetry XML Open Integration Module, hospitals can seamlessly integrate with other facility systems. The security management systems allow for the management of health information, patients, staff and assets with one system. Some of the healthcare facilities that have chosen the benefits provided from the installation of a Symmetry system are Liberty Health and Newton Memorial Hospital.

School Districts can deter vandalism and inappropriate behavior inside and outside of schools with a Symmetry Security Management System. Integrate the security system with city officials for immediate notification in the event of an emergency. Universities can implement a one card solution campus where one credential can open a dorm room, purchase lunch, and check out a library book. Data protection and comprehensive system reporting provide accurate records for administration. You'll find a Symmetry system at the University of Nebraska-Biological Processing Development Facility and Palm Beach Country School District.

Company Backgrounder

AMAG is a leading government solution provider of access control and security management solutions. Symmetry Homeland software and hardware solutions have been developed to meet the needs of federal government agencies meeting the PIV-II, FIPS 201 and HSPD-12 specifications as their physical security data model. AMAG proudly secures several government agencies.

You'll find Symmetry Security Management Systems managing security at several casinos, theaters, and museums. Controlling guests, the public, and employees has never been simpler. Monitor who goes where and when and take care of problematic guests quickly.

Proper management of assets saves companies thousands of dollars every year. With AMAG's asset management package, tag items with a special device. Asset tracking antennas affixed to each doorway generate an alarm when an item reaches the door, automatically locking the door.

Whether you have one high rise to secure, or several high rises to network across the world, AMAG's Symmetry Video Management System and Security Management System provides the perfect networked solution.
