

Security Beyond Integration

AMAG Technology prides itself on maintaining close relationships with our resellers to provide the best service together with security management solutions employing the latest technology.

Relationships develop from trust, and build into partnerships where we work together to secure the consumer. Trust begins at the top with our commitment to exceptional customer service. The product development team engineers progressive, technology driven products for our customers to deliver. Support is readily available, whether it's via phone, email or in person. The customer rests at night because his buildings, employees and assets are safe.

The staff at AMAG cares about your success and the safety of your clients. We intend to prove it to you every day with our words and actions.

Symmetry™ Security Management Systems

Symmetry Security Management Systems (SMS) offer intelligent networked solutions scaled to manage access control and security management challenges from small, remote facilities to multi-national organizations located around the globe. The entire software portfolio is created from the same code, so regardless of how your needs change, you can acquire whatever you need as your system evolves. Training and upgrades are easy. The open architecture standard ensures interoperability with a wide range of peripherals and information sharing with other systems.

As a Microsoft Gold Certified Partner, the Symmetry SMS is designed and tested in accordance with the latest Microsoft technology guidelines, ensuring ultimate product performance.

Symmetry multiNODE controllers deploy quick decisions when a card holder presents a credential to a reader, eliminating network traffic and delays. The Symmetry controllers utilize a distributed database detailing valid cardholders and access rights. The database is automatically synchronized with the server as changes occur and only relevant data is sent to the controllers to minimize network traffic. If network failure occurs, the Symmetry controller continues to operate and buffer details of the transaction before it is sent to the server. Alarms are sent to the server using priority routing so you don't miss relevant events.

AMAG's easy to use Symmetry SMS can be custom designed to provide a synergistic solution with any combination of access control, digital video, identity management, alarm monitoring, intrusion, and visitor management.

Government

"We love the AMAG security management system," said Donna Olson, WHQ Security Manager, Nike.

"I highly recommend it to any company that needs a complete access control solution."

- NIKE

AMAG transformed the US Navy's security initiatives when it implemented a revolutionary smart card solution for the US Navy's Multi-Technology Automated Reader Card (MARC) program in 1995. Since then, smart card physical access security management systems have been designed to meet the requirements outlined in the Homeland Security Presidential Directive – 12 (HSPD-12).

Federal government agencies using government specifications as their physical security data model install a Symmetry Homeland Security Management Solution. Symmetry Homeland integrates the latest data model and encryption standards to meet government security initiatives. Symmetry Homeland in conjunction with smart cards and readers is designed to provide powerful integrated access control and security management solutions for those users taking advantage of Federal smart card standards such as FIPS 201, CAC, TWIC and FRAC.

The Department of Defense, including the Pentagon and the seven bureaus of the Department of the Interior reap the benefits of a Symmetry Homeland SMS.

PEOPLE

TRANSCENDING

TECHNOLOGY

AMAG's Customer and Technical Services Teams implement efficient and creative solutions that meet the evolving and diverse needs of our customers. Our people strive to strengthen and build new relationships while anticipating the needs of customers by proactively planning and executing new and improved services. AMAG strives to employ only the best qualified people to produce results.

AMAG's Symmetry Portfolio of products is available through a network of Symmetry Authorized Resellers. Symmetry Authorized Resellers are thoroughly trained and certified in the sales, installation and service of Symmetry SMS to ensure excellence and performance.

Regional Sales Managers assist Symmetry Authorized Resellers with system sales, specification proposals, pricing, partnering and presentations. RSMs visit customer sites to deliver project specific expertise to Symmetry Authorized Resellers to give them every advantage to win the proposal.

Symmetry™ Product Portfolio

Progressive Security Management Solutions

Symmetry Homeland

Security management system for government agencies working towards PIV-II compliance with the FIPS 201 standard for Personal Identity Verification.

Symmetry Global

High-performance, multiple-database SMS ideal for multi-site applications that require centralized or decentralized monitoring and database administration.

Symmetry Enterprise

SMS for larger, multi-site applications requiring centralized monitoring and database administration across a LAN/WAN, and an unlimited number of readers and clients.

Symmetry Professional

Cost effective SMS for sophisticated mid-sized, multi-location applications with requirements up to 512 readers and nine client workstations.

Symmetry Business

Access control system for small or stand-alone applications.

Symmetry Video Management

Digital video solution supporting IP cameras, multiple technologies, and 36 camera views per PC.

Symmetry Edge Network Video Server

ENVS stores 80 GB and forwards on demand.

Progressive Digital Video Solutions

AMAG Proudly Secures:

Government Entities, Healthcare Organizations, Universities, School Districts, Manufacturing Plants, Utilities, Ports, Financial Institutions, Museums, Gaming and Recreation Facilities, Commercial High Rises

Symmetry™ Video

Symmetry Video is a powerful video solution that seamlessly integrates with the Symmetry SMS. Symmetry Video Management can stop crimes in progress through advanced, 'smart' software. The software allows users to configure the video system to recognize a behavior they want to identify. Security personnel are alerted immediately of an alarm, reducing the negative impact of security breaches. The technology sifts through irrelevant activity and significantly reduces costly false alarms.

Security guards can view every camera on the system using multiple camera views on the video matrix. Display several screens on one monitor to view live, recorded or archived video images simultaneously. Event based recording ensures all events are captured, and automatic alarm pop-up screens immediately communicate alarms to security guards. A migration path from analog to IP based camera technology allows you to upgrade technology at your convenience.

Optimize your IT network infrastructure with Symmetry ENV5® (Edge Network Video Server) powerful store and forward solution. Record video on the edge of the network and forward on demand. Symmetry Video expands the scope of the security management system into a truly seamless integrated synergistic solution.

"Cedars-Sinai Medical Center utilizes all feature sets from AMAG's access control system," said Donna Earley, Director of Environmental Health and Safety. "It seamlessly integrates with our infant protection system, CCTV and other building systems to provide a complete security management system. The user interface is intuitive, which allows updates and reconfigurations to quickly adapt as our security needs change."
