

AMAG TECHNOLOGY PROTECTING COMMERCIAL BUILDINGS

AMAG Technology is a leading security management system manufacturer that brings innovative, flexible, and technologically advanced solutions to the design, deployment and maintenance of commercial high rise buildings.

We have over 40 years proven experience in securing commercial locations throughout the US and by working with **select integrators and security professionals**, have seamlessly integrated a range of technologies to protect your staff, premises and assets.

Commercial buildings must offer secure environments to attract long-term tenants. AMAG's reputation in delivering value over the life of the Symmetry Security Management System ensures the investment made today meets your needs and is equipped to tackle future challenges. Customers such as the luxurious *Mansion on Peachtree* and the *Blackstone/EOP high rise* in Boston agree.

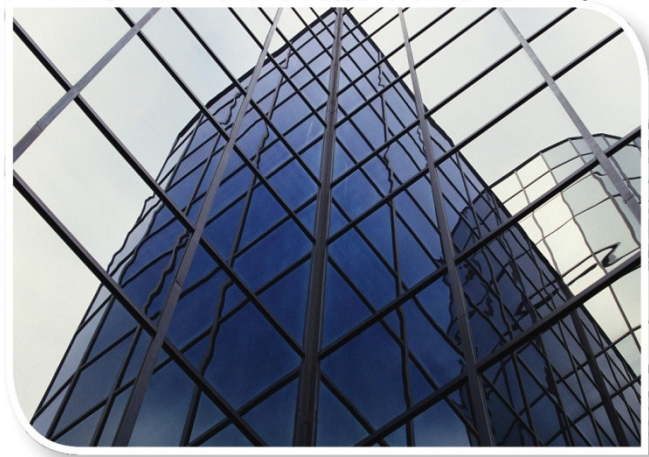

AMAG recognizes commercial buildings require an efficient supplier with the expertise to help security directors consider the long term costs of a system to **maximize** return on investment. We specialize in migrating existing systems into one centrally managed infrastructure to seamlessly link card readers and users to meet specifications within budget.

Each tenant can be set up separately within the Symmetry software to manage its own security operations. The autonomy allows tenants to customize a security procedure that fits their company culture, yet still communicate with the main lobby to pre-register guests or report incidents to the building's central command center.

Key Concerns

- Tenant and public safety - Monitor any situation before an incident occurs, react, respond, and provide evidence.
- Visitor and contractor monitoring - Reinforce weak perimeter, with consistent management of visitors and contractors.
- Protection of facilities and sensitive areas - Secure IT rooms and expensive equipment. Quickly view, acknowledge and respond to alarms.
- Manage entrance and lobby – Control access through doors, turnstiles and elevator management.
- Threat response – Instantly reconfigure site security at the touch of a button using the Threat Level Manager option.
- Secure area control - Customize access dependent upon time, date, user type, area use, department, tenant and building.

Security directors can save significantly on installation costs when they choose the Symmetry EN-IDBC power enabled door controller. This highly IT centric solution eliminates the need for extensive cabling, costing much less per door than traditional hardwiring. AMAG's optional BACnet module allows Symmetry hardware to perform occupancy sensing for your BACnet Building Management System. It helps tenants control their individual environments and save on costs.

WHAT'S YOUR GREATEST SECURITY CONCERN?

Controlling Visitors

Commercial buildings must control many visitors, which requires strong and consistent management, administration and monitoring. Symmetry Visitor Management, which comes standard in all the Symmetry software packages, enables staff to enroll visitors, capture their photograph, issue an ID badge, assign to responsible hosts, and monitor their movements throughout the site. The easy to use web interface allows tenants to pre-authorize guests before their scheduled arrival to save time.

Secure Area Control for Lobbies and Parking

Lobbies in high rise buildings bustle with the comings and goings of employees, visitors and contractors. Integrate Symmetry Security Management with turnstiles to help control access. Employees swipe their card on the reader and the turnstile grants access. Apply that same concept to parking garages and gates to ensure only employees and authorized visitors can park in designated areas.

Elevator Control

Elevator management enables multi-tenant buildings to protect tenants and gives them the ability to control access to their floors and areas. Symmetry's flexibility allows building tenants to choose how they manage elevators. While some tenants may choose to control elevator access 24/7, others can have open access all day.

Mobile Security

Having flexible, on the spot security has never been more critical. Hawkeye Mobile gives you the power of a Symmetry Client on a handheld computer. Enroll, modify and verify cardholders or manage your control room if necessary, all from the palm of a hand.

Responding to Safety Threats

Symmetry Security Management's Threat Level Management option enables authorized personnel to quickly adjust the site security with a single click of a button. The change can determine the card holders who are allowed to gain access, the areas they can access and the operation of security equipment around the building. Switch to card and PIN or fingerprint mode to enhance security.

Video

The Symmetry Security Management System takes the safety of the staff and visitors as priority and using the tightly integrated access control and video solution can monitor any situation before an incident occurs to reduce threats. Security officers can monitor high traffic lobbies and entryways during peak times of the day. System design will ensure increased surveillance of high risk areas such as the building's data center or server rooms.

Intrusion Detection

The Symmetry Intrusion Management module allows authorized employees to present their access card to AMAG's Javelin card reader to unlock the door and simultaneously disarm the intrusion system in a permitted area behind the door. Each leaseholder assigns rights to chosen employees, therefore controlling their own system.
