

AMAG TECHNOLOGY PROTECTING SCHOOLS AND CAMPUSES

AMAG Technology is a leading security management system manufacturer that brings innovative, flexible, and technologically advanced solutions to the design, deployment and maintenance of K-12 schools and college campuses.

AMAG Technology's Symmetry security management software packages provide a platform for access control, video management, biometrics, visitor management and other security and building management functions.

We have over 40 years proven experience in securing schools and campuses throughout the US and by working with select integrators and security professionals, we have seamlessly integrated a range of technologies to protect your students, staff, premises and assets. For example, Symmetry integrates with enrolment software and automatically exports student information saving hours of data entry. When information is edited or a student deleted, the updates appear in the Symmetry system. This added convenience saves time, money and increases efficiency by maintaining accurate records.

College campuses must offer secure environments to attract students, yet are faced with a declining budget for security. AMAG's reputation to deliver value over the life of the Symmetry Security Management System ensures the investment made today meets your needs and is equipped to tackle future challenges. Customers such as Jacksonville State University and Baruch College in Manhattan agree.

AMAG recognizes education facilities require an efficient supplier with the expertise to help security directors to consider the long term costs of the system to **maximize** return on investment. We specialize in migrating existing systems into one centrally managed infrastructure to seamlessly link card readers and users to meet specifications within budget. Increasingly this migration involves the IT

Key Concerns

- Student and staff safety - Monitor any situation before an incident occurs, react, respond, and provide evidence.
- Behavior management – Curb bullying, vandalism and violence with strategically placed cameras.
- Visitor and contractor monitoring - Reinforce weak perimeter, with consistent management of volunteers, visitors and contractors.
- Protection of buildings and sensitive areas – Lock down buildings at specified times and restrict access to sensitive research laboratories or computer labs.
- Entrance control – Control access through doors, turnstiles and mantraps using Symmetry's badging or visitor management feature.
- Threat response – Instantly reconfigure site security at the touch of a button using the Threat Level Manager feature.
- Manage access - Customize access dependent upon time, date, user type, area use, department, and building.

department too, to create a centrally managed security system across the IP network infrastructure.

Security directors can save significantly on installation costs when they choose the Symmetry EN-IDBC PoE (Power over Ethernet) one door controller. This highly IT centric solution eliminates the need for extensive cabling, costing much less per door than traditional hardwiring.

WHAT'S YOUR GREATEST SECURITY CONCERN?

Controlling Visitors

Schools and universities must control many visitors, which requires strong and consistent management, administration and monitoring. Symmetry's Visitor Management, which comes standard with the software, provides an easy to use method for staff to enrol visitors, capture their photograph, and issue a temporary ID badge. Proper visitor management practices keep out unwanted perpetrators and schools and campuses safe.

Access Control

Monitor and control who has access to secured areas of the school. Symmetry allows users to choose the level of security needed. Manage one school or building, or an entire district or campus from one central location and seamlessly integrate all security functions needed, i.e. video, intrusion, visitor management, ID badging plus many others.

Protecting Buildings and Sensitive Areas

School districts can schedule the locking and unlocking of each school, down to each door to provide tight perimeter and classroom security. Controlling access to music rooms and computer labs in the K-12 environment, and dorm rooms, research labs and multi-media centers at the college level is easy to manage.

One Card Does It All

Utilize a smart card solution to provide the student population with one card for access control, cashless vending, library usage and parking access.

Biometrics

Biometric readers add another layer of security to any security plan. Add biometric readers to research labs to protect scientific and medical research. For residence hall buildings, place biometric readers on the perimeter. Student can use a biometric to open doors or a biometric plus a PIN. Using biometric readers eliminates the risk of losing and sharing cards.

Complement Crisis Management Plans

Symmetry's Threat Level Management option complements any school's crisis management plan. TLM enables school administration or campus police to quickly adjust school or campus security with a single click of a button. The change can determine which staff is allowed to gain access, the areas they can access and the operation of security equipment around the building. Switch to card and PIN or fingerprint mode to enhance security.

In the unfortunate event of an emergency, security staff can utilize Symmetry's remote monitoring feature to view the inside of a building and help direct law enforcement. This also comes in handy when security staff needs assistance after hours.

Video Combats Vandalism and Threats

School Districts must have the means to provide proof of incidents and Symmetry Video offers a tool that allows them to capture events throughout the day. The Symmetry System takes the safety of students and staff as priority and using the tightly integrated access control and video solution can monitor any situation before an incident occurs to reduce incidents. Strategically placed cameras can drastically reduce theft, bullying, vandalism and violence in entryways, hallways and gymnasiums. Rugged outdoor cameras monitor parking lots. Providing proof to parents and law enforcement will ensure credibility and expedite procedures.
