AMAG Technology, DAP Technologies and Hawkeye Mobile Secure Lane Community College

A deeply integrated solution with world-class partners provides best solution

Symmetry Enterprise integrates with DAP Technologies' rugged, handheld wireless computers to increase the efficiency of data collection, processing and transmission, producing a highly secure, completely mobile security solution. The system also integrates with R32, the class scheduling software system used by Lane Community College (LCC). This three-way integration shares the same database allowing mobile enrollment and providing total flexibility.

AMAG Technology and HID Global – Trusted Technology Partners Provide Benefits for Customers

To be successful in the security industry, many manufacturers form partnerships with companies that make complementary products to their own. AMAG Technology, a security management and video solutions provider, has spent years building a relationship with HID Global to help provide complete solutions to its customers. Establishing a committed partnership with a reputable company such as HID Global provides many benefits. [Read more...](#)

Securing the U.S. Marines with Innovation from AMAG Technology and Innometriks

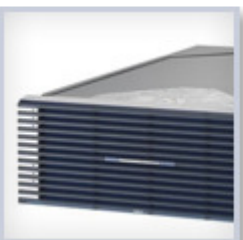

Innometriks' open innovation approach to the security market provided the U.S. Marine Corp a unique biometric solution to integrate with AMAG's Symmetry Security Management System (SMS) to secure their gates. Innometriks' rugged Rhino reader integrated with AMAG's SMS allowed the Marine Corp to use their existing card technology such as the new CAC, existing CAC, PIV Cards and their retiree and dependant barcode cards on the same system. The Innometriks/AMAG solution took a complex problem and provided a simple solution that allowed them to add an extra layer of security during heightened threat levels. [Read more...](#)

Intrinsa's New Products Provide Single Appliance; Eliminating Servers and Storage

Integration with AMAG's Symmetry Security Management Solution Provides Cost-Effective Solution

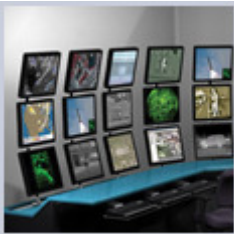

Intrinsa, the VideoAppliance company, recently announced three next generation appliances that further simplify surveillance systems while dramatically cutting equipment cost and operational expenses. The new members of the award-winning Intrinsa VideoAppliance family [Read more...](#)

AMAG and NEC - High Availability and Disaster Recovery in Security Systems

Organizations face many security risks such as faulty hardware, software defects, missed security events and over-reliance on human coverage. Systems failures such as software crashes, hardware failures or a facility disaster, whether natural or deliberate, can wreak havoc on a company if they are not prepared.

A fault tolerant server solution provides the protection a company needs. Fault tolerant servers are designed to overcome hardware crashes. In the case of NEC Fault Tolerant Server, it is like two standard servers running in lockstep to provide complete redundancy for every component of the server. [Read more...](#)

Partner Profile: Winsted

Winsted creates, develops, and markets technical furniture products for applications in video, production, broadcast, security, power utilities, process control, transportation, and additional industries around the world. Their modular system approach has become the industry standard for all markets, and their experience developing specialized products allows them to easily expand into dynamic new markets.
