

Digitally Transform your Organization

SYMMETRY MOBILE

Using a mobile phone to open doors offers organizations a flexible, eco-friendly and cost-saving access control solution. In addition to saving money on cards, organizations save time by eliminating physical access card distribution and replacement when a card is lost or stolen. In today's challenging work environment, access control is managed remotely, enforcing physical distancing and reducing interaction with the security department.

Symmetry Mobile delivers a convenient solution for organizations using mobile devices or in conjunction with physical credentials for users who are transitioning to a mobile system to gain access to secured doors. Frictionless setup of a mobile credential eliminates the need to physically interact with the security team or visit a badging office. Symmetry Mobile allows central management of credentials, photos and devices remotely. When used with the Symmetry Blue Bluetooth reader, organizations have a contactless and transformational security solution.

HOW TO USE

New users receive an email notification inviting them to download Symmetry Mobile. Once they have downloaded the app, they scan the QR code provided to register their credential. Users capture a photo and are ready to go.

CONTROL WHO ENTERS YOUR FACILITY

Organizations can now require employees to fill out a customizable health screening questionnaire on their smartphone before being allowed access into a building. Upon successful completion, their credential will be enabled for a specified period of time, for example, one

day. If the form is not completed successfully, the credential will expire and the employee is denied access to the facility. Symmetry Mobile operates with physical access cards or mobile credentials. Send email notifications to managers for visibility.

DEPLOY WITH ANY SYSTEM

Symmetry Mobile and the Symmetry Blue Bluetooth reader integrate with Symmetry Access Control, and are capable of integrating with other access control systems, making it an ideal solution for Enterprise users deploying more than one system. Licenses are sold per reader, and available as Software-as-a-Service or deployed on-premise.

ORGANIZATIONS ARE IN CONTROL

Organizations can create rules to centrally configure which devices may be used in compliance with corporate policies. Built-in device control replaces the potential need for expensive mobile device management products. Having management capabilities within Symmetry Mobile means there are no other applications or policies being loaded onto employees' personal devices which may create privacy concerns. Organizations can block certain mobile device manufacturers, beta operating systems or even specific devices through a centrally managed portal.

Organizations can customize the signal strength and read range on a per device and/or per person basis. This powerful flexibility can increase security and accommodate those who may need a longer read range, such as a person in a wheelchair, to open a door. Shorter read ranges can prevent piggybacking.

Security teams can manually add users or import from Symmetry Access Control or another system. Invite prospective credential holders to register via email. Automated enrollment eliminates the need to go into the badging office. Organizations can customize the credential approval process so the security team must approve photos before the user's credentials are activated.

A virtual credential in Symmetry Mobile displays a person's name and photo for identification purposes, similar to a normal badge. Scanning a barcode on the app's virtual badge provides a touchless method for security officers to authenticate an individual's access rights on-site. Store multiple virtual credentials in Symmetry Mobile's digital wallet for use at different locations and across different access control systems.

AT A GLANCE

- Customized health screening questionnaire controls access and reduces liabilities
- Organizations determine how often employees fill out the questionnaire
- Mobile forms functionality can be used with physical and/or mobile credentials
- Audit trail tracks responses, ensuring compliance
- Compatible with Symmetry Blue readers, supporting organizations transitioning to a fully mobile solution
- Use Mobile form functionality with virtually any existing Symmetry Access Control system or other access control system
- Mobile app runs in the background
- Use a PIN code or biometric template (fingerprint or biometric) to unlock the credential (not the phone)
- Available as a hosted or on-premise solution
- Door read and unlock time is less than 1.2 seconds
- Available for iOS and Android devices
- Supports multiple languages
- Theming and company logo customization available
