# DATASHEET

Symmetry™ Optional Modules

Key Features

Greater levels of efficiency, flexibility and effectiveness

Automates and improves site security

Enables all security management equipment to be controlled from a single user interface

Reduces training costs

The Symmetry Security Management System software provides a comprehensive range of fully-integrated additional software modules.

This document summarizes the major optional modules. For further information, please refer to the individual data sheets

Threat Level Manager™

Enables the level of security to be easily changed to match the level of threat

Supports five fully-customizable threat levels

Selective access control, depending on the threat level

Compatible with government threat-level security policies

Workflow Designer

Fully customize the alarm acknowledgement process

Unlimited number of workflows per Symmetry system

Create simple question and answer guides with actions based on responses

Automate sending of commands

Alarm priority updates

Intrusion Management

Provides integration with DMP, HISEC*, Honeywell Galaxy*, DSC®, Borch and Siemens* intrusion alarm panels

M2150 Controller provides complete intrusion management for SCIF applications (U.S.A market only.)

Alarms detected by the panels are displayed in the Symmetry Security Management System Software

Enables complete alarms monitoring from a common user interface

Two-way communication allows Symmetry to control alarm panels

Trigger commands give automatic control of external equipment when an alarm occurs

Data Connect (Import/Export)

Enables identity data to be imported/exported from/to third-party databases (e.g., human resources or ERP)

Allows import/export from/to text or SQL database

Encryption prevents unauthorized imports

Selectable card data for export

Automatically add access rights during import

Provides a simple method to receive alarm and event transactions from third party systems

Real time or batch import

Symmetryweb™

Remotely access the Symmetry to perform key functions such as Access Control management,visitor authorization and alarm management via aweb interface

Set up new card holders, assign access rights to card readers and doors and register visitors

Removes the need to install or maintain local thick client software, while still providing access to data

Interface with Symmetry using a standard web browser from a desktop workstation or mobile device

Web Access

Fully-integrated web browser solution using Citrix or Windows Terminal Services

Provides an easy yet secure method for a user to monitor, control and administer a system from almost any location in the world

128-bit Secure Socket Layer (SSL) encryption available

Enables tasks such as card administration or report generation to be carried out remotely over the Internet or Intranet

Web Clients require no client installation CD orsoftware protection key
Security maintained by user login

Intercom Management

Provides an easy-to-use graphical interface for managing and answering calls

Dedicated Intercom Control screen displays all calls

Fully integrated with Access Control and Video Management

A Command button allows a barrier or door associated with the selected intercom to be opened

Safety Roll Call (Muster)

Produces a report of people, including visitors, who may be in the building and where they are

Allows multiple muster areas with individual operation

Invaluable during fire or other emergencies

New reports are continually generated until no one isleft in the building

Card readers can be used at muster stations toidentify employees

The muster can start automatically when a monitorpoint is triggered

Active Directory Single Sign-On

Allows authentication with Microsoft Active Directory. Symmetry used to bypass the normal login andpassword screen

Xml Open Integration

Allows systems to exchange data with the Symmetry Security Management System using industry-standard XML and Web Services technologies

Simplifies the task of linking diverse systemswith Symmetry

Alarms from other systems can be exported to Symmetry for centralized alarm management

Enables an external system to send commands to Symmetry to control card readers, etc.

Allows card holder information to be importedand exported
